Digital Literacy
Project Report
(2025-26)

Name: Madhav Pillai

Reg. No.: 25BCE10351

Branch: CSE (Core)

Faculty: Dr. Kannan

Date: 30 March 2026

Introduction

In today's technology-driven world, digital literacy has become an essential skill for students. It involves the ability to use digital tools effectively, communicate professionally online, and stay safe from cyber threats. As a Student Digital Ambassador, my role is to help peers understand and apply these skills in their academic and personal lives.

This project focuses on building a Digital Literacy Portfolio through five practical tasks, including infographic creation, developing professional profiles, exploring coding platforms, writing formal emails, and studying cybercrime awareness. Each task provided hands-on experience with real world tools and platforms.

Through this project, I learned the importance of maintaining a professional digital presence, using online tools efficiently, and being aware of online risks. These skills are essential not only for academic success but also for future career opportunities.

Task-1: Digital Literacy Infographic

DL Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic explains what digital literacy is and why it is important for students. It includes key topics such as safe internet practices, useful digital tools, and maintaining a professional online presence.

I used simple icons, headings, and short descriptions to make the design visually appealing and easy to understand. The goal was to ensure that anyone viewing the infographic could quickly grasp the key ideas.

One challenge I faced was balancing text and visuals. Initially, the design looked overcrowded, so I had to simplify the content and focus only on important points. This helped me improve my design and presentation skills.

Overall, this task helped me learn how to present information creatively and effectively.

Task-2: Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are important for building a strong digital presence.

GitHub is used to showcase coding projects and technical skills. I created a profile README including my basic details and learning goals. LinkedIn helps in building a professional network and presenting my educational background. Kaggle is useful for practicing coding and improving problem-solving skills.

In the coming years, I plan to regularly update my GitHub with projects, enhance my LinkedIn profile with achievements, and continue solving problems on Kaggle. These platforms will help me prepare for internships and job opportunities.

This task made me realize the importance of maintaining a professional and active online presence.

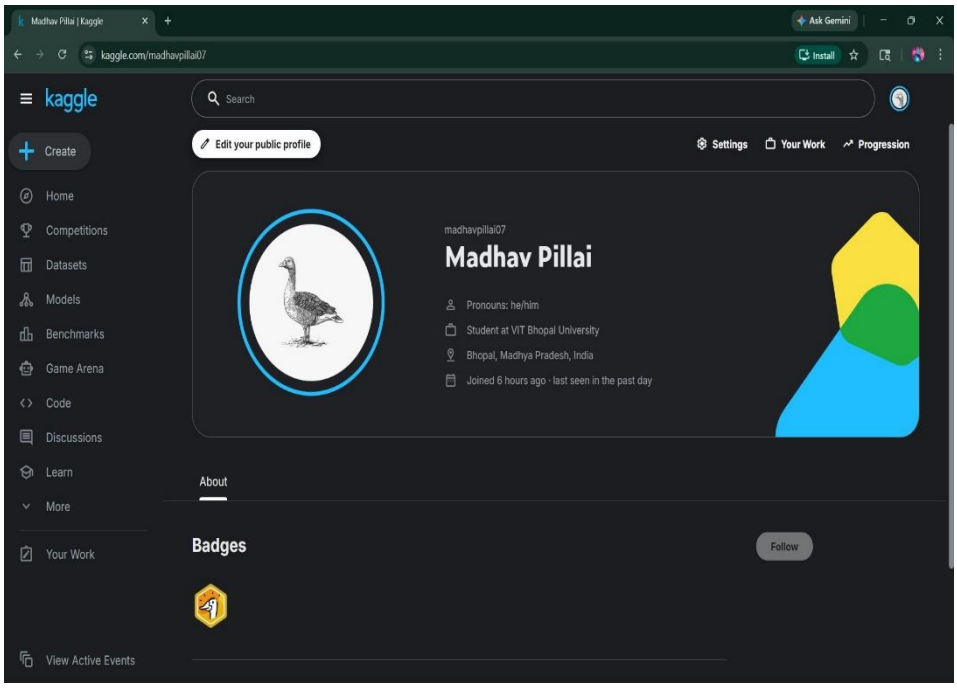
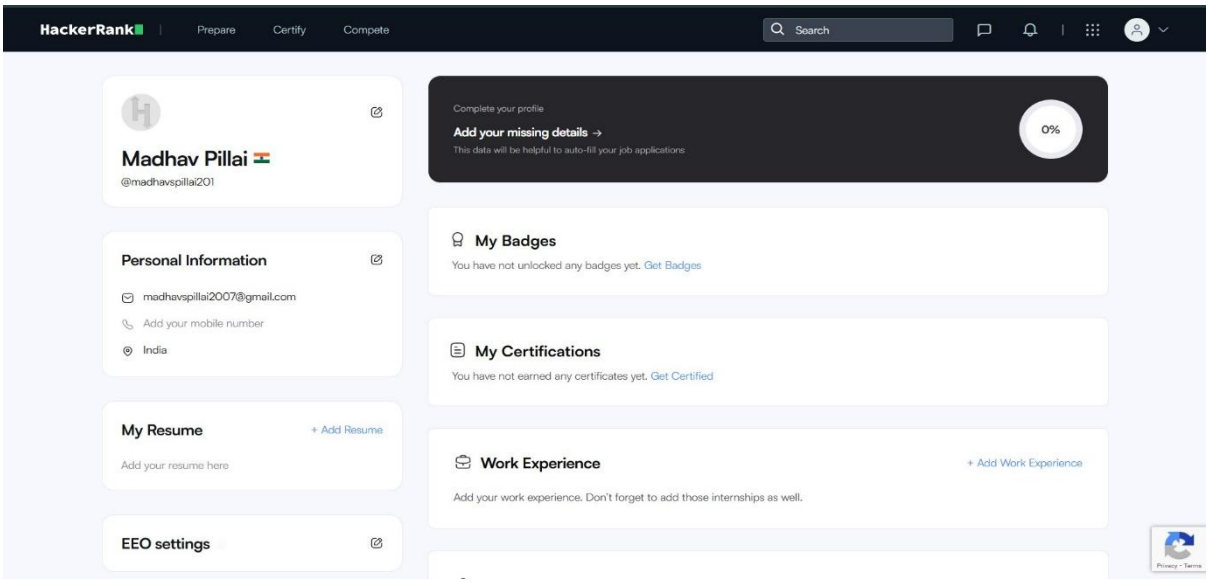
LinkedIn Profile



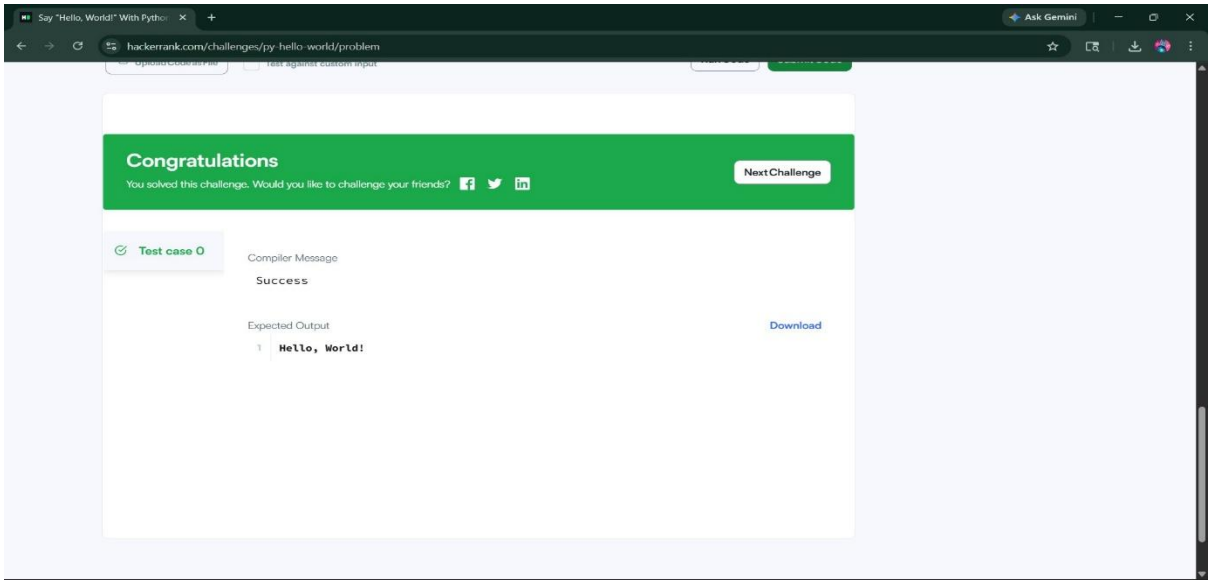
Kaggle Profile

Task-3: Coding & Collaboration Platforms

For this task, I used **HackerRank** to complete a beginner-level coding challenge. This helped me understand basic programming concepts and improve my logical thinking.



HackerRank Profile



Problem Solving in HackerRank

I also created a **Google Form** as a Digital Literacy Awareness Quiz. The form includes **five questions** such as **multiple-choice** and **short answer** questions. It can be used to test students' understanding of digital literacy.

Creating the form helped me learn how to collect responses and analyse data using Google Sheets. This is useful for surveys, feedback collection, and academic purposes.

These tools are very helpful for students. **HackerRank** improves coding skills, while **Google Forms** supports collaboration and data collection. Both will be useful throughout my academic journey.

Task-4: Email Etiquette & Communication

In this task, I wrote two professional emails—one requesting an assignment extension and another applying for an internship. I followed proper email etiquette, including clear subject lines, polite greetings, structured content, and professional closing.

I also created a checklist of social media do's and don'ts to promote responsible online behaviour among students.

Poor digital communication can lead to misunderstandings and create a negative impression. For example, sending informal or unclear emails to professors can affect credibility. This can be avoided by maintaining professionalism and clarity in communication.

This task helped me understand the importance of proper communication in academic and professional environments.

Task-5: Cybercrime Awareness

For this task, I studied phishing as a cybercrime. Phishing involves tricking users into sharing sensitive information through fake emails or websites.

What surprised me most was how realistic phishing attacks can appear, making them difficult to identify. Many people fall victim due to lack of awareness.

After completing this task, I will be more cautious while clicking on links and will always verify the authenticity of emails and websites before sharing any personal information.

This task helped me understand the importance of cybersecurity and safe internet practices.

Conclusion

This project helped me develop essential digital literacy skills such as creating visual content, building a professional online presence, using collaboration tools, and understanding cybersecurity.

Each task provided practical knowledge and improved my confidence in using digital platforms. These skills will be highly useful in my academic journey and future career.

Overall, this project was a valuable experience that highlighted the importance of responsible and effective use of digital technologies.
